Cable Route Tracer

Cable Route Tracer CRT is an essential item in the kit for fault location of underground power and telecom cable network. It is a powerful audio frequency system that can be effectively used for various unique functions such as route tracing of any metallic cable, depth measurement, live loaded cable tracing and ground survey of underground utilities.

The system is capable to trace route of underground cable maximum 15 km, and find out the depth up to 5 meter, This method is found to give more accurate results in presence of other metallic utilities in close proximity.

The system can be used to trace route of live cables under load with the help of receiver unit and search coil in passive mode. It is also use to carry out ground survey and metallic pipe route tracing in inductive mode effectively.

Applications

It is used for route tracing of any underground cable in power transmission, distribution and signal cable networks or cable fault location service provider.
